

# CARGO

## **Introducing the Boxer Cargo – a new generation of electric transportation**

Whether you're a 'last mile' courier, a university a hotel or you simply don't travel light - the Boxer 'Cargo' electric cargo trike can take heavy loads through the urban and off road environment with ease. Its spacious cargo box has a slam-shut heavy duty locking roller shutter door allowing the operator to leave the trike in confidence that its load is secure.

## **100% UK designed and built – and built tough**

Like all Boxer trikes, the Cargo is built tough with aluminium construction throughout and the same level of security that you would find on a commercial vehicle. Boxer's trademark box-girder rear frame construction provides a level of strength that cannot be achieved with tube construction frames of the same weight and also makes the Cargo's appearance look streets ahead when compared to more traditional tube framed designs.

The Cargo has three locking hydraulic disc brakes which can be used as a handbrake to prevent the trike rolling away on hills. These brakes also bring the Cargo to a rapid stop even in wet weather. With its 250W motor fitted as standard and the addition of a 42 front to 34 tooth rear crawler gear, the Cargo can ascend steeper hills with the rider still on-board.

## **Class leading innovations**

Boxer's much revered 12 Volt safety light set can be added as an optional extra. This provides the trike with vehicle strength LED headlights, turn-signal indicators, stop/tail lights and a loud horn – all controllable from a single handlebar mounted cluster switch. With the addition of this option, the cycle appears and signals like any car or van would providing a very high level of visibility and hence safety.

All in all – the Cargo is the next generation of electric vehicles, having the appearance on the road of a motor vehicle but without the need for road taxes, insurance and a driver's licence due to its legal classification as a cycle.

## **Key features**

- 7 speed derailleur and powerful 250W electric hub motor with 13.4 Ah battery hidden under floor.
- 15mph maximum motor speed ( by pedalling harder speed can be increased)
- ~120kg maximum cargo load (270kg max gross weight – rider – 55kg bike = load capability)
- 5 hour battery charge costs just 7 pence
- Typical range of 15-25 miles which can be extended by carrying more batteries or increased pedal assistance
- USB mobile device charging port on models fitted with 12V safety light set

## **Optional extras**

- Full road safety set with handlebar controlled flashing turn signals, horn, stop/tail and headlights
- Custom colour schemes and full 'wraps' for advertising your organisation
- Non road legal, high power motor kits available allowing up to four times the motor power of road legal version.
- Boxer provide a design and manufacture service where we can provide completely custom front end solutions to suit your requirements including vending, flatbed, cage, ice cream freezers, chalet cleaners and coffee vending to name but a few....
